

# Set Up & Use of NorthStar™ Adhesive Spray Canister

**1:** Mini, Large, Intermediate or Jumbo canister. Standard gun and 6' hose. (other gun tips and hose lengths available, talk to your adhesive supplier regarding your application)

**2:** Hand tighten smaller hose end to canister.

**3:** Use 5/8" wrench to fully tighten hose to canister.

**4:** Attach standard gun to large end of hose. Hand tighten, using a 3/4" wrench to fully tighten.

**5:** Open valve fully at top of canister checking for any leaks.

**6:** Turn gun trigger lock counter clockwise to open gun fully.

## Set-up

**Step 1-5:** See Diagram

## Application

**Step 6:** Hold gun perpendicular and 4-6" from surface to be sprayed. Holding the gun too close will cause uneven spray and dripping. Holding the gun too far from surface will cause an uneven and lighter spray of adhesive. The speed you move the gun will also affect the adhesive spray pattern.

## Clean-up

**Step 7:** Turn off valve at top of canister. Spray all remaining adhesive from gun and hose. Remove hose and gun from canister.

Hook hose and gun to a NorthStar-branded Adhesive Remover (AR) or Citrus Adhesive Remover (ACR) and clean thoroughly. AR and ACR cleaners are available in aerosol cans, canisters and in bulk for your convenience.

Remove hose and gun from cleaner.

## Storage

**Step 8:** If canister is not empty it can be stored according to storage information on label and on the Product Information Sheet on our website: [www.northstarchemicals.com](http://www.northstarchemicals.com)

## Disposal

**Step 9:** The Mini and Large aerosol canisters are recyclable and disposable. Intermediate and Jumbo canisters are returnable. See MSDS and disposal and return information on our website: [www.northstarchemicals.com](http://www.northstarchemicals.com).

*ALWAYS TEST ADHESIVES ON NEW SUBSTRATES BEFORE USE.*
